GEO & SEO READINESS TECHNICAL AUDIT REPORT (SAMPLE v2.1)

Generated by GEO & SEO Readiness MCP Server 2.1 | Deterministic 5-Dimension Evidence & Competitor Gap Benchmark

Primary Audited Target: `https://www.midea.com/global` | **Comparison Benchmark:** `https://www.haier.com/global`
Audit Timestamp (UTC): `2026-10-28T04:00:00Z` | **Engine Mode:** `HTTP Probe + 2.0s Playwright Chromium SPA Fallback`

1. EXECUTIVE SUMMARY & COMPOSITE READINESS SCORECARD

Traditional SEO platforms evaluate legacy backlink graphs while ignoring whether AI search engines (**ChatGPT Search / OAI-SearchBot**, **PerplexityBot**, **Claude-SearchBot**, and **Google AI Overviews**) can physically crawl, render, and extract structured entity facts from your domain. This sample technical report demonstrates the exact deterministic audit output produced by **GEO & SEO Readiness MCP Server 2.1** (https://dejunchen770231.gumroad.com/l/geo-seo-mcp-pro).

Readiness Dimension	Weight	Primary Target (Midea)	Benchmark (Haier)	Evidence Verdict
1. Search & AI Crawler Policy	**30%**	78 / 100 (Wildcard Allow)	72 / 100 (Wildcard Allow)	Explicit AI Rules Missing
2. Schema.org JSON-LD Graph	**25%**	64 / 100 (Org + WebSite)	60 / 100 (Org Only)	Missing Product/FAQ JSON-LD
3. LLM-Readable Index (/llms.txt)	**15%**	0 / 100 (HTTP 404)	0 / 100 (HTTP 404)	Critical AI Index Gap
4. XML Sitemap Architecture	**15%**	88 / 100 (Valid Index)	85 / 100 (Valid Index)	Pass (Streaming Verified)
5. TTFB & Crawler Response	**15%**	82 / 100 (340ms TTFB)	79 / 100 (410ms TTFB)	Pass (<600ms Threshold)
Composite Weighted GEO Score	**100%**	**64.9 / 100 (Grade: C+)**	**61.0 / 100 (Grade: C)**	**+3.9 Pt Net Lead (Verified)**

Key Architectural Findings & Immediate Quick Wins

- **Zero Hallucinated Metrics & Circuit-Breaker Integrity:** All 5 weighted dimensions returned verifiable HTTP/DOM evidence across both domains (0% unmeasured weight). When a target blocks probes via WAF challenge, the engine marks the dimension `UNMEASURED` rather than fabricating a fake zero score.
- **Missing `/llms.txt` Machine Manifest (-15.0 Pts Composite Drag):** Neither enterprise domain exposes a root `/llms.txt` or `/llms-full.txt` manifest. Deploying a standardized `/llms.txt` index immediately unlocks the full 15% weight and provides AI retrieval agents with canonical product category, specification, and regional support anchors.

- **Incomplete Commercial Entity Schema (-9.0 Pts Drag):** Static HTML contains basic `Organization` markup, while key product category and FAQ nodes require client-side hydration. Injecting server-side `Product` and `FAQPage` JSON-LD increases LLM citation extraction density.

2. DIMENSION 1 DEEP DIVE: RFC 9309 AI SEARCH VS. TRAINING CRAWLER MATRIX (30% WEIGHT)

A critical mistake in modern technical SEO is conflating **AI Real-Time Search Crawlers** (which drive high-intent buyer referral clicks from ChatGPT Search, Perplexity, and Claude) with **Foundation Model Training Scrapers**. Our MCP engine evaluates `/robots.txt` rules separately across six distinct AI user-agents:

Bot User-Agent	Operator	Crawler Role	Observed Rule	Recommended Policy
`OAI-SearchBot`	OpenAI	**AI Search Citation**	Implicit Allow (*)	**Explicit Allow: /**
`PerplexityBot`	Perplexity AI	**AI Search Citation**	Implicit Allow (*)	**Explicit Allow: /**
`Claude-SearchBot`	Anthropic	**AI Search Citation**	Implicit Allow (*)	**Explicit Allow: /**
`GPTBot`	OpenAI	Model Training	Implicit Allow (*)	Explicit Allow or Scope
`ClaudeBot`	Anthropic	Model Training	Implicit Allow (*)	Explicit Allow or Scope
`Google-Extended`	Google	Gemini / AI Training	Implicit Allow (*)	Explicit Allow: /

Why Explicit AI Search Bot Declarations Matter

When a domain relies solely on a generic `User-agent: *` wildcard, CDN/WAF managed rulesets (such as Cloudflare Bot Fight Mode or Akamai AI Scraper blocks) frequently override the wildcard and serve HTTP 403 challenges to `OAI-SearchBot` and `PerplexityBot`. Explicitly declaring allow rules in `/robots.txt` alongside corresponding WAF allowlist rules guarantees uninterrupted citation indexing.

3. DIMENSION 2 & 3 DEEP DIVE: CHROMIUM SPA DOM FALLBACK & /LLMS.TXT AUDIT (40% COMBINED)

Modern storefronts built on React, Next.js, Vue, or AEM frequently suffer from the **SPA Empty-Shell Blind Spot**: static HTTP fetchers receive an unhydrated HTML skeleton while critical product specs, comparison tables, and JSON-LD blocks are injected asynchronously via JavaScript.

Inspection Layer	Static HTTP Fetch (cURL)	2.0s Playwright Chromium Pass	Hydration Delta
Readable Body Characters	4,120 chars	14,890 chars	**+261% Content Exposed**
JSON-LD Script Blocks	1 block (`Organization`)	3 blocks (`+WebSite`, `BreadcrumbList`)	**+2 Dynamic Schemas**
Product / FAQ Entities	0 detected	0 detected (Rendered as plain divs)	**Action Required (See Patch)**

Inspection Layer	Static HTTP Fetch (cURL)	2.0s Playwright Chromium Pass	Hydration Delta
/llms.txt Endpoint Status	HTTP 404 Not Found	N/A (Direct Endpoint Check)	**Missing Manifest (-15 Pts)**

Competitor Comparability & Circuit-Breaker Verification

In side-by-side competitive benchmarks, legacy tools often score a competitor as "0/100" when a firewall blocks their scraper, producing misleading executive summaries. **GEO & SEO Readiness MCP Server 2.1** enforces a strict **Unmeasured-Weight Circuit Breaker**: if unmeasured dimensions exceed 25% of total weight on either domain, comparative delta claims are automatically suppressed and flagged for manual proxy verification.

4. DIMENSION 4 & 5 DEEP DIVE: STREAMING SITEMAP PARSER & TTFB LATENCY (30% COMBINED)

- **Streaming XML Sitemap Inspection (15% Weight):** Audited root `sitemap.xml` index and child sitemap chunks using our memory-safe streaming parser (handles multi-megabyte enterprise sitemaps >4MB without OOM crashes). Confirmed valid `<loc>` and `<lastmod>` tags across primary category endpoints.
- **TTFB & AI Agent Timeout Margin (15% Weight):** Measured median Time-to-First-Byte at `340ms` (Primary) vs. `410ms` (Benchmark), well within the `600ms` real-time RAG browsing ceiling.

5. READY-TO-DEPLOY REMEDIATION PATCHES (COPY-PASTE IMPLEMENTATION)

Deploying the three deterministic patches below raises the composite GEO Readiness Score from **64.9/100 (C+)** to **94.0/100 (A)** within a single release cycle:

Patch A: Explicit AI Search & Training Policy for `/robots.txt`

```
# --- AI SEARCH CITATION BOTS (EXPLICIT ALLOW) ---
User-agent: OAI-SearchBot
Allow: /
User-agent: PerplexityBot
Allow: /
User-agent: Claude-SearchBot
Allow: /
# --- AI MODEL TRAINING & EXTENDED INDEXING ---
User-agent: GPTBot
Allow: /
User-agent: ClaudeBot
Allow: /
User-agent: Google-Extended
Allow: /
Sitemap: https://www.yourdomain.com/sitemap.xml
```

Patch B: Root `/llms.txt` Machine-Readable Index Template

```
# [Brand / Product Name] — Official AI & LLM Discovery Index
> Concise 1-sentence entity definition stating exact product category, target customer persona,
core technical specifications, and geographic availability.

## Core Product Lines & Canonical URLs
- [Flagship Product Line A](https://www.yourdomain.com/products/line-a): High-efficiency
commercial & residential systems with verified specification matrices.
- [Technical Documentation & Specs](https://www.yourdomain.com/support/specs): Direct PDF
manuals, JSON-LD entity definitions, and warranty terms.
```

Patch C: Server-Side `SoftwareApplication / Product + FAQPage` JSON-LD Injection

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@graph": [
    {
      "@type": "Product",
      "name": "Your Flagship Product Name",
      "description": "Explicit factual summary with verifiable specifications and target use
case.",
      "brand": { "@type": "Brand", "name": "YourBrand" },
      "offers": { "@type": "Offer", "price": "49.00", "priceCurrency": "USD", "availability":
"https://schema.org/InStock" }
    },
    {
      "@type": "FAQPage",
      "mainEntity": [
        {
          "@type": "Question",
          "name": "How does [Product] compare to legacy alternatives?",
          "acceptedAnswer": { "@type": "Answer", "text": "Direct quantitative comparison answer
in under 75 words." }
        }
      ]
    }
  ]
}
</script>
```
